# What is news aggregator and why it is important?

- News Aggregator, online platform or software device that collects news stories and other information as that information is published and organizes the information in a specific manner.
- News aggregation is based on the concept of content syndication, where content created by one or more news-gathering organizations is distributed through a different organization.

# HOW NEWS AGGREGATOR WORKS

## COLLABORATIVE FILTERING

This algorithm recommends news articles based on users interaction with the platform and the behaviour of other users with similar interests.

## HYBRID FILTERING

This algorithm combines collaborative filtering and content-based filtering to provide more accurate recommendations.
